

# Sustema **ENTITY**

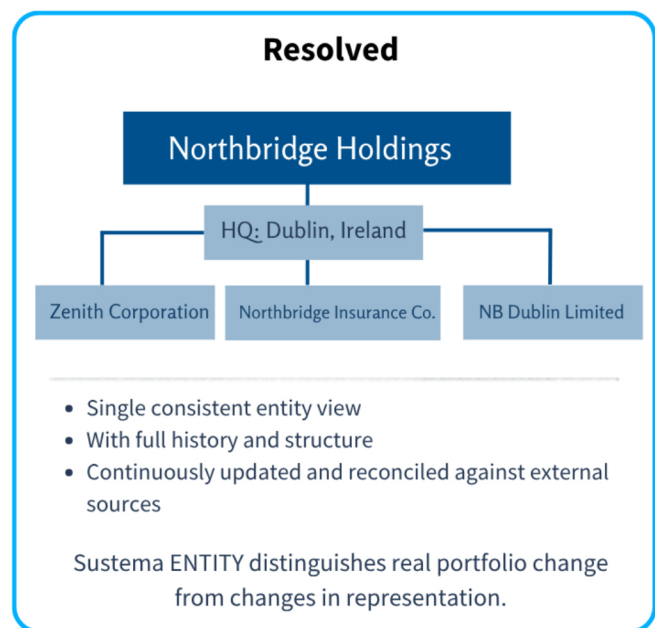

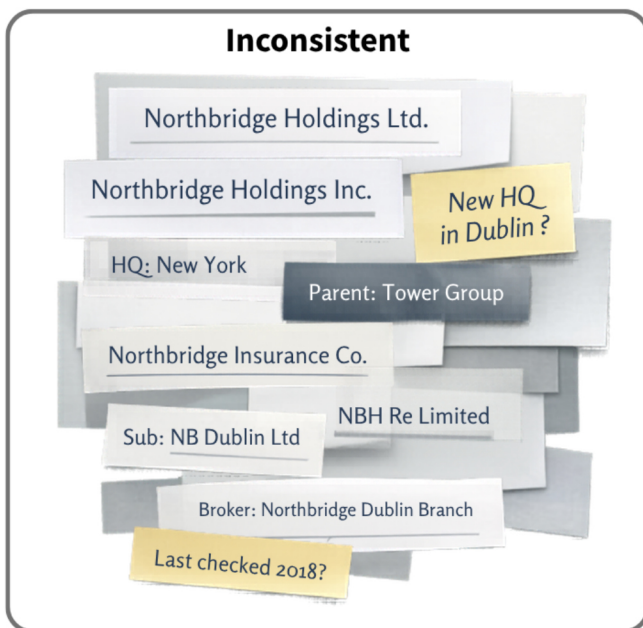

## A reliable foundation for understanding portfolio exposures.

Corporate structures evolve. Most portfolios don't keep up.

Sustema ENTITY turns fragmented and inconsistent entity data into a reliable, auditable baseline that portfolio teams can trust over time.

### The Problem : Fragmented Data and Shifting identities

Over time, the same insured entities are represented differently across systems, brokers, lines of business, and even in policy documentation. Companies rename, merge, divest....but such changes are not reflected consistently across portfolios. Without a consistent entity foundation that is regularly and reliably refreshed, portfolio managers have a reduced capability to track, aggregate and interpret their portfolio exposures.

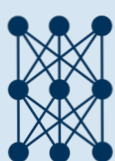

### What Sustema ENTITY Does

- **Identifies and aligns** multiple representations of the same entity
- **Maintains** a consistent view of entities as they evolve over time
- **Maps** entities to multiple industry segment classifications - coherently and consistently across portfolios
- Enables **reliable client aggregation** within and across portfolios

## Why it matters

- **Clarity over time** - Exposure can be interpreted on a comparable basis from one period to the next - even as companies change structure, ownership, or naming
- **More confident capacity decisions** - Capacity usage can be assessed more directly against underwriting guidelines
- **Reduced ambiguity** - Changes in exposure reflect underwriting decisions — not inconsistencies in entity representation

## Built for Modern Portfolio Management teams

### AI-Driven Resolution

Advanced models identify and **maintain entity relationships** across fragmented data sources, supporting consistency at scale

### Global coverage

Built on data sourced from national company registers across jurisdictions, covering **300M+ entities globally**

### Continuously updated

Entity structures and relationships **refreshed multiple times daily** to reflect real-world changes

### Auditable baseline

Entity mappings are **traceable and explainable**, supporting internal validation and governance needs

## How it fits

- **Works with / alongside existing systems** - no replacement required
- No change to underwriting workflows
- Not a one-off clean up - maintains consistency over time.

## The result

### Portfolio teams gain confidence that they understand

- Who they insure
- How insured entities may, in fact, be related
- How client exposure is evolving within and between industry segments
- What may be driving client profile changes

Don't let fragmented data and shifting corporate identities obscure your true exposure.

See how your portfolio looks when viewed on a reliable entity foundation.
